Overview

To address these challenges, a robust power supply scheme has been developed using Pulse Frequency Modulation (PFM), isolated AC-DC converters, and Zero Voltage Switching (ZVS) regulators. Telecom power supply systems form the backbone of modern telecommunications. Without them, communication services would falter during power outages or fluctuations. Their. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. This includes outdoor integrated power systems, AC/DC. With the expansion of global communication networks, especially the advancement of 4G and 5G, remote communication base stations have become increasingly critical. Many remote areas lack access to traditional power grids, yet base stations require 24/7 uninterrupted power supply to maintain stable. These conditions require innovative power supply solutions that not only minimize size but also enhance efficiency and thermal management while complying with strict electromagnetic interference (EMI) standards.
