

PIENAAR ENERGY (PTY) LTD

American flywheel energy storage system

Overview

Beacon Power is developing a flywheel energy storage system that costs substantially less than existing flywheel technologies. Flywheels store the energy created by turning an internal rotor at high speeds-slowng the rotor releases the energy back to the grid when needed. By providing multiple cycles of kinetic energy without chemical degradation, our flywheels are uniquely suited to support the transition from fossil fuels to sustainable renewable. and high power quality such as fast response and voltage stability, the flywheel/kinetic energy storage system (FESS) is gaining attention recently. There is noticeable progress in FESS, especially in utility, large-scale deployment for the electrical grid, and renewable energy applications. Electrical energy is thus converted to kinetic energy for storage.

6000+ Cycle Life

Flywheel energy storage

Flywheel energy storage (FES) works by spinning a rotor (flywheel) and maintaining the energy in the system as rotational energy. When energy is extracted from the system, the flywheel's rotational ...
