

PIENAAR ENERGY (PTY) LTD

Anti-corrosion commissioning of modular energy storage cabinets for ports

Overview

This report updates the previously published Energy Storage Integration Council (ESIC) Energy Storage Commissioning Guide 2018. In order to align with the rapidly changing energy storage technology space, these guidelines were refined to address how commissioning can be most efficiently addressed. In modern industries, offshore operations, and remote engineering projects, modular functional containers play vital roles — serving as offices, living quarters, laboratories, or energy storage units. However, beyond versatility, these containers must withstand harsh environments while ensuring. The commissioning process ensures that energy storage systems (ESSs) and subsystems have been properly designed, installed, and tested prior to safe operation. With their scalable, fire-proofing, and anti-corrosion capabilities, these systems can meet project requirements at various scales and are suitable for a range of environmental conditions.
