

PIENAAR ENERGY (PTY) LTD

Are double-sided photovoltaic panels suitable for the north

Overview

The south-facing roof plane is most common for solar in the northern hemisphere, as it receives the most direct sunlight exposure. A bi-facial or dual-sided solar system has panels installed on multiple roof planes, such as south and north, or east and west-facing roofs. Putting solar panels on both sides of your roof means installing photovoltaic (PV) solar panels on the front and back sides of your roof planes. This is also referred to as a bi-facial solar system. In a typical solar installation, panels are mounted facing one direction on the roof, angled to. This comprehensive guide covers proper mounting height (0. If you've ever seen bifacial panels and pondered their efficiency or value, you're not alone.
