

**PIENAAR ENERGY (PTY) LTD**

# **Are local solar photovoltaic panels insulated**

## Overview

---

Solar panels are a great way to save money on your energy bill, but did you know that they can also help insulate your home?

That's right – solar panels can actually provide an extra layer of insulation to your home, keeping it cooler in the summer and warmer in the winter. Solar panels work by converting sunlight into electricity, which can then be used to run appliances and lights in your home. I've found that understanding the connection between insulation and solar efficiency can really boost your energy savings. A well-designed passive solar home first reduces heating and cooling loads through energy-efficiency strategies and then meets those reduced loads in whole or part with solar energy. Proper insulation helps protect the system from environmental factors, ensures optimal performance, and extends the overall lifespan of the solar panel. To help accelerate that shift, the revised Energy Performance of Buildings Directive (EPBD) states that rooftop solar panels must be installed on all new buildings, public buildings and existing non-residential buildings which undergo a major renovation, all according to the time schedule shown. We use solar thermal energy systems to heat: Solar photovoltaic (PV) devices, or solar cells, convert sunlight directly into electricity. Small PV cells can power calculators, watches, and other small electronic devices.
