Bangkok Green Solar Water Pump Requirements

Overview

The technical basis for this guidance document is the International Electrotechnical Commission (IEC) International Standard 62253, Photovoltaic pumping systems – Design qualification and performance measurements. Despite government efforts, including over 900 Solar Water Pumping (SWP) demonstration units, many farmers remain hesitant to adopt this technology. This study examines the factors influencing farmers' willingness to invest in SWP in Thailand's drought-prone north and northeast regions, the most. Bangkok, Thailand, Novem- Delta Electronics (Thailand) PCL. developed an original solar power electric water pump solution for a customer providing well water to remote communities in support of the Thailand government's rural development policy. Delta's customer is a global manufacturer. This document gives detailed instruction of all technical topics pertinent to the design and installation of solar powered water systems within the rural water supply context. Thailand is located in the tropics, with sufficient sunlight and an average annual temperature of 24-30°C, making it very suitable for deploying solar-powered irrigation systems.

Bangkok Green Solar Water Pump Requirements

Willingness to Pay for Renewably Sourced Irrigation with Solar Water

This study investigates farmers' willingness-to-pay (WTP) for installing a Solar Water Pumping (SWP) system in drought-prone areas in Thailand to understand farmers' demand and ...
