Battery capacity of communication signal base station

Overview

How many batteries does a communication base station use?

Each communication base station uses a set of 200Ah·48V batteries. The initial capacity residual coefficient of the standby battery is 0.7, and the discharge depth is 0.45V output meets RRU equipment. Communication Base Station Li-ion Battery by Application (Macro Base Station, Micro Base Station, Others), by Types (Below 100 Ah, 100-500 Ah, Above 500 Ah), by North America (United States, Canada, Mexico), by South America (Brazil, Argentina, Rest of South America), by Europe (United Kingdom). High-capacity batteries ensure continuous service, especially for critical systems like 5G networks that demand low latency and high availability. ESTEL battery backup systems excel in meeting these challenges, offering an uninterruptible power supply tailored to the needs of telecommunications. Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

Applications

How to Determine the Right Battery Capacity for Telecom Base Stations

Formula: Capacity (Ah)=Power (W)×Backup Hours (h)/Battery Voltage (V) Example: If a base station consumes 500W and needs 4 hours of backup at 48V, the required capacity is: ...
