

# Belgian wind and solar hybrid power generation system

## Overview

---

In the SWiM project, six partners join forces to conduct research into the combination of marine technologies in the Belgian North Sea. In a new project, SWiM - Solar and Wind in the Belgian Marine Zone, funded by the Belgian Energy Transition Fund, six partners are joining forces. The technology for floating photovoltaics has made great progress. A group of researchers from Belgium performed a complementarity analysis for offshore wind power combined with floating photovoltaics. The team found that complementarity is strong on weekly and monthly timescales, and that it can increase under certain climate change scenarios. Assuming a full. attery storage solutions. By pairing our HAWT or VAWT turbines with your existing PV.
