CCTV reports on solar thermal power generation

Overview

CCTV reported that the dual-tower design and the possibility of future multi-tower systems overcome the capacity constraints of single-tower plants and pave the way for expanding solar thermal power generation in China. In a first, China has switched on a solar thermal power station in the Gobi Desert, a project described as a more cost-effective and efficient use of the technology, with the potential to be scaled up, South China Morning Post reported. The thermal power station built by the China Three Gorges. MVM had 14 photovoltaic power plants that needed to be protected in high-residential areas while protecting the privacy of neighboring residents. In practice, outdoor surveillance faces a number of restrictions, including restricted energy supply, unsteady networks, irregular patterns, and long exposure to natural pressures.
