# **Can Huawei use base station communication equipment**

## Overview

---

As a global leader in telecommunications infrastructure, Huawei delivers advanced base station solutions that support 4G, 5G, and future-ready networks. These systems are essential for commercial enterprises, government institutions, and remote operations in today's hyper-connected. The DBS5900 is a wireless access device for the eLTE wireless broadband private network solution. It provides wireless access functions, including air interface management, access control, mobility control, and user resource allocation. It explains the advantages and disadvantages of each. A Huawei base station is a critical component in modern telecommunications networks, specifically in cellular networks like 4G LTE and 5G NR. Let's dive into a technical explanation. A base station, also known as an eNodeB (for 4G LTE) or gNodeB (for 5G NR) in Huawei's terminology, is a piece of. A BTS (Base Transceiver Station) from Huawei is the radio site equipment that supports mobile access technology (2G, 3G, 4G and in many cases migration towards 5G). Next Generation Core (NGC): a 5G core network.
