# **Can asean outdoor solar power hub pass**

## Overview

---

Expanding the grid infrastructure of ASEAN countries could unlock 24GW of new solar capacity, according to Ember Climate. Grid is the driver to unlock solar and wind markets and provide opportunities for fossil-dependent countries to be renewables exporters. Potential rise in solar and wind generation share in Sumatra, Sarawak, Lao PDR. ASEAN's missing link is an interconnected series of green energy sources, the presence of which will only become more critical as the region becomes a hub for the data centers fueling the AI revolution. This is a key conclusion drawn from the latest Ember Climate report into the region, which highlights. The Association of Southeast Asian Nations (ASEAN) is a dynamic market for solar power as well as for renewable energy mergers and acquisitions. Here Apricum Senior Advisor Moritz Sticher provides another update to his popular 2021 article, Solar Power in ASEAN: A snapshot and outlook of the solar. With the region facing escalating climate risks and growing energy demand, the APG presents a transformative solution to facilitate the integration of renewable energy sources, enhance energy security, and reduce carbon emissions. It envisions a network of cross-border power interconnections that enable electricity.
