Can photovoltaic panels be assembled with electric meters

Overview

If you install solar panels in your home, you may need to change your electric meter. Some electric meters only measure electricity going into your home. They can tell you things like how much electricity your system is generating, how much energy you're using, and how much energy you are still purchasing from the utility. For customers of MG&E and Alliant, as well as some local utility companies, a property would ideally have one meter when going solar. The Inverter, the AC Disconnect, the Production Meter, the Service Panel and the Bi-Directional meter all work together on your new system.
