

## PIENAAR ENERGY (PTY) LTD

# Can solar energy generate electricity on the shady side

## Overview

---

The truth is, solar panels can still produce electricity in the shade, but at a reduced rate. Shade affects their ability to absorb sunlight, which is vital for energy production. Factors such as panel type, placement, and shading analysis play a crucial role in mitigating the impact of shade on solar panel. The study came to the surprising conclusion: air pollutants deposited on solar panels can decrease the amount of produced energy by more than 25 percent simply by obstructing the direct sunlight. Newer models perform significantly better under obstructions than older versions.
