

**PIENAAR ENERGY (PTY) LTD**

# **Canberra wind and solar energy storage power station**

## Overview

---

The large-scale battery storage system will deliver 250 megawatts (MW) of power, store renewable energy and support grid reliability. Enough energy to power one-third of Canberra for two hours during peak demand periods. Canberra Times: ground breaking ceremony, plugging in profits from a big battery. ITP Renewables was engaged by ECU Energy to provide expert planning. As solar and wind power contribute over 35% of the ACT's electricity (2023 data), managing supply fluctuations becomes critical. ITP stands out as a model for integrating solar power with advanced storage technology. This project not only addresses energy reliability but also paves the way for scalable solutions in regions struggling with nels with lithium-ion trates how energy storage can mbers explain why similar. Australia's capital is stepping into the renewable energy spotlight with its ambitious Canberra energy storage reservoir project. Designed to tackle the intermittency of wind and solar power, this pumped hydro initiative could store enough electricity to power 200,000 homes for 8 hours—equivalent. This goal was reached in 2020 when the Australian Capital Territory (ACT) — home to the nation's half a million-strong capital, Canberra — had enough renewable electricity to make coal and gas obsolete.
