

**PIENAAR ENERGY (PTY) LTD**

# **Central africa energy storage for renewable energy**

## Overview

---

Hybrid microgrids, solar-plus-storage plants, and grid-support systems are increasingly required to stabilize frequency, reduce curtailment, and ensure consistent electricity supply for communities and industry. Africa's renewable energy expansion is accelerating, led by solar deployment across East, West, and Southern Africa. Yet as generation capacity grows, the continent's central challenge is shifting from installation to integration. Grid instability, diesel dependence, and weak transmission networks are placing new emphasis on battery energy storage systems (BESS) as critical infrastructure rather than optional add-ons. Nairobi, Kenya — Intersolar Africa 2026 at Sarit Expo Centre highlighted a pivotal shift in the continent's. The Walo solar-storage IPP - seen as a landmark development for Senegal's grid - has been officially commissioned. With abundant sunlight and favourable climatic conditions, Africa is uniquely positioned to leverage solar energy.
