

PIENAAR ENERGY (PTY) LTD

China-europe solar power generation solar system

Overview

As the world's largest manufacturer of solar photovoltaic (PV) technology, China supplies over 80% of Europe's solar panels, enabling the region to accelerate its renewable energy transition amid ambitious climate targets like the EU Green Deal. A report by SolarPower Europe and Fraunhofer ISE finds EU-made solar modules cost €0.12/W more than Chinese imports, but targeted policies could close the gap and help reach the EU's 30 GW annual manufacturing target by 2030. Global solar installations reached nearly 600 GW - an impressive 33% increase over the previous year - setting yet another record. China installed 329 gigawatts (GW) of solar capacity within 2024, representing 55%. China's solar power expansion into the European market underscores a dynamic yet complex partnership driven by complementary goals.
