

**PIENAAR ENERGY (PTY) LTD**

# **China s high-precision energy storage box**

## Overview

---

NANJING — In the eastern Chinese coastal county of Rudong, Jiangsu province, a 35-storey-high steel structure houses around 1,000 25-metric-ton gravity blocks that are lifted to store surplus renewable energy and lowered to produce electricity during peak demand. Compressed air energy storage (CAES) is a highly efficient large-scale energy storage technology that stores excess electricity by compressing air during off-peak hours and releases it to generate power during peak demand. The high-speed motor is one of the core components of CAES systems. The. On a mountain pass in Jiawa village, Qusum county, Shannan, southwest China's Xizang autonomous region, rows of energy storage units hum quietly beside a solar-storage power station. "These facilities are designed to work with photovoltaic power generation. These systems are essential for balancing supply and demand, enhancing grid stability, and facilitating the integration of intermittent renewable sources like solar.
