

PIENAAR ENERGY (PTY) LTD

China s offshore wind power generation

Overview

As of March 2025, China has emerged as the world's offshore wind powerhouse — growing from under 5 GW in 2018 to 42.7 GW in 2025 (50% of global capacity). Offshore wind could play a role in decarbonizing China's coastal provinces, but fossil fuels stand in the way. The wind turbine can generate enough electricity to power 44,000 homes each year. 3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. A 20-megawatt offshore wind turbine unit was put into operation on the waters of southern. China installed a 20-MW offshore wind turbine in Fujian—the largest in real marine conditions—with fully domestic components, proprietary blade designs, and 20%+ weight reduction that lowers foundation costs. Advanced AI-driven forecasting and failure prediction by companies like Envision Energy. Jiang, Guangdong Province, and constructed by CGC. It is the first national public platform approved by CNCA, which is able to provide offshore wind construction of offshore wind industry clusters.

China s offshore wind power generation

World's first 20-megawatt offshore wind turbine unit put into

The world's first 20-megawatt offshore wind turbine was connected to the grid for power generation after successful debugging. This is the first time that China has completed the hoisting, ...
