# **Comparison between electrochemical and energy storage systems**

## Overview

---

Two primary types of energy storage systems are thermal energy storage systems and electrochemical batteries. Electrochemical storage systems like lithium-ion batteries are suitable for short-term applications, offering high energy density and efficiency—but they remain costly, pose safety risks, and have significant environmental impacts. Thermal storage systems store energy by heating a medium and can be used for space heating, cooling, or generating electricity through a. There are several approaches to classifying energy storage systems (see Chaps. This chapter compares the capabilities of the.
