

**PIENAAR ENERGY (PTY) LTD**

**Comparison table of various  
wind turbine generators**

## Overview

---

This article introduces the efficiency comparison of various wind turbines, including common vertical axis wind turbines (Savonius and Darrieus) and typical three-blade horizontal axis wind turbines. Among them, the Savonius turbine is a drag type wind turbines, and the Darrieus wind turbine and. Usually wind turbines are classified by their mechanical power control, and further by their speed control. All turbine blades convert the motion of air across the air foils to torque and then regulate that torque in an attempt to capture as much energy as possible. Different types of generators are used in the wind turbine systems (WTS). Today more and more wind farms are connected into the power grid. 4 to 16 kW) Onshore Wind Turbines OffshoreWind Commercial Turbines (10 to 20 m) (16 to 100 kW) Medium -Turbines (20 to 50 m) (100 to 1000 kW) Large -Turbines (50 to 100 m) (1000 to 3000 kW). Out of various renewable energy sources, wind generation is most cost effective in addition to its various advantages.
