Conakry microgrid development

Overview

Recently, a PV-storage-diesel microgrid project in Conakry, the capital of Guinea, completed its trial run and was officially delivered and put into commercial operation. The project has an installed capacity of 7. The project. Caption: Energy access is a catalyst that accelerates progress across the Sustainable Development Goals (SDG), particularly for women and youth in rural communities. The transformative power of energy access is undeniable. It is more than just keeping the lights on—it's a catalyst that accelerates. The agreement provides for the implementation of deployable energy systems to power non-interconnected local microgrids, based on resilient solutions that hybridise renewable energy sources, storage and back-up solutions. With 320 days of annual sunshine, Guinea's capital is uniquely positioned to become a solar energy hub.
