## Overview

---

On average, a residential solar panel generates between 250 and 400 watt-hours under ideal conditions, translating to roughly 1 to 2 kWh per day for a standard panel. However, actual solar panel energy output depends on several factors, including panel wattage, sunlight hours. Now, the amount of electricity in terms of kWh any solar panel will produce depends on only these two factors: Solar Panel Size (Wattage). The bigger the rated wattage of a solar panel, the more kWh. Solar panels are quietly transforming rooftops around the world, turning sunlight into electricity and helping homeowners slash utility bills. That's enough to cover most, if not all, of a typical. While it might seem intimidating, it's actually fairly easy to come up with a decent estimate of how many kilowatt-hours your solar panels can produce each day.
