

PIENAAR ENERGY (PTY) LTD

Data Center Rack IP66 Performance Comparison

Overview

In an IP66 vs IP65 comparison, both ratings share the same first digit. That means they both offer complete protection against dust ingress. IP66 protects against powerful, high pressure. IP66 rated cabinet performance is quickly becoming the new standard for serious outdoor deployments. When you are placing active equipment outside controlled spaces, you cannot afford to gamble on marginal protection. The difference between an IP66 vs IP65 comparison is not just a small spec change. What Is a Network or Server Rack?

A network rack (also called a server rack) holds networking equipment such as servers, modems, uninterruptible power supply (UPS) units, routers, network switches, and audio and video equipment. Choose from a complete portfolio of 1-2-and-4 socket rack servers to deliver high core density for your traditional applications, virtualization and cloud-native. Optimized dimensions reduce real estate costs by maximizing floor space. Streamlined installation processes save time and reduce expenses. Defined by the IEC 60529 standard, IP ratings tell you exactly how well a box guards against solids (like dust) and liquids (like water).
