

Data communication function of base station

Overview

A base station connects your phone to the network. They provide the coverage you need for calls and data. They transmit. They are communication hubs in a cellular network that ensure continuous service as users move throughout a geographical area. What is a Base Station?

A base station is a fixed transceiver that serves as the central communication point for mobile devices within a defined geographical area, known as. A base station plays a pivotal role in the realm of telecommunications, acting as the cornerstone of connectivity. They play a vital role in ensuring seamless connectivity, efficient data transmission, and reliable communication services.
