# **Direct-in wind power generation system**

## Overview

---

Direct-drive wind turbines use a system where the rotor is directly connected to the generator without the need for a gearbox. Unlike conventional wind turbines that rely on. Direct-drive permanent magnet synchronous wind power systems, characterized by their simple structure and high reliability, have gradually become the mainstream in wind power systems. By controlling the pitch angle to reserve surplus power, the wind turbines can actively engage in frequency. . 4 shows the double-fed wind power generation system.

## Direct Drive Wind Turbine vs. Geared Drive Wind Turbine

In the direct-drive generator for wind turbine, the rotor is directly connected to the rotor hub. Direct-drive generators operate at the same speed as the turbine's blades and must therefore be much bigger.

## How Do Wind Turbines Work?

Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, which creates electricity. Wind is a form of solar energy caused by a combination of three concurrent events: The ...
