# Disconnect the communication base station battery

## Overview

---

LLVD is a power management mechanism that automatically disconnects the load (i. This article clarifies what communication batteries truly mean in the context of telecom base stations, why these applications have unique requirements, and which battery technologies are suitable for reliable operations. This guide outlines the design considerations for a 48V 100Ah LiFePO4 battery. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. 45V output meets RRU equipment. Telecom base stations—integral nodes in wireless networks—rely heavily on uninterrupted power to maintain connectivity. To ensure continuous operation during power outages or grid fluctuations, telecom operators deploy robust backup battery systems. However, the efficiency, reliability, and safety.

## Disconnect the communication base station battery
