

**PIENAAR ENERGY (PTY) LTD**

# **Distribution of solar power stations in my country**

## Overview

---

The table below ranks countries based on their deployment of solar power plants of 4-MW AC and over. [Click here](#) to see figures by continent. We prepare overviews showing the key data in markets of your choice, as described here. The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 MW) solar PV data. The utility-scale data covers all operating solar farm phases with capacities. Solar power plants use one of two technologies: Photovoltaic (PV) systems use solar panels, either on rooftops or in ground-mounted solar farms, converting sunlight directly into electric power. Concentrated solar power (CSP, also known as "concentrated solar thermal") plants use solar thermal. Nearly every country in the world has the right combination of geographic conditions, weather, and sunlight to generate all the electricity it needs—and more—using solar power facilities placed within its own borders. Welcome to Global Solar Atlas v2. Select sites, draw rectangles or polygons by clicking the respective map controls.

## Distribution of solar power stations in my country

---

### Installed solar energy capacity

Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such as per capita measures, as well as ...

### Solar power by country

Overview  
Africa  
Global use figures  
Asia  
Europe  
North America  
Oceania  
South America

Many African countries receive on average a very high number of days per year of bright sunlight, especially the dry areas, which include the arid deserts (such as the Sahara) and the semi-desert steppes (such as the Sahel). This gives solar power the potential to bring energy to virtually any location in Africa without the need for expensive large-scale grid-level infrastructural developments. The distribution of solar resources across Africa is fairly uniform, with more than ...
