

## **PIENAAR ENERGY (PTY) LTD**

# **Do photovoltaic panels have residual power protection**

## Overview

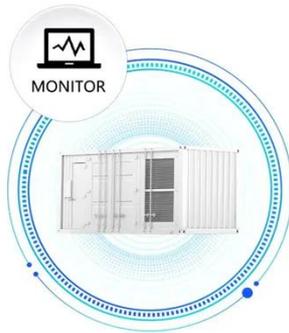

---

Recommended photovoltaic protections include surge arresters, overcurrent circuit breakers, and residual current devices. For PV systems, DIN VDE 0100-410 (IEC 60364-4-41) and DIN VDE 0100-712 (IEC 60364-7-712) can be consulted. Residual-current devices are used as protection against indirect contact (personal safety). These elements can be divided into two main types: Capacitive discharge current - Discharge current is generated mainly by the parasitic capacitance of the PV modules to PE. Yet, when the value of the leakage currents reaches a threshold (30 mA in homes in France), the RCD may switch off and unintended. For this reason, residual current protection expert Doepke offers residual current circuit-breakers specifically for the requirements of photovoltaic systems, heat pumps and electromobility. As energy prices have risen and the focus on sustainability. The clean and renewable energy with lower costs. Moreover, the advantages of photovoltaic panels are numerous, both in terms of duration of the installation and in terms of reduced maintenance costs, this ensures that the trend and the investments are destined to continue.

### Inverters and Residual Current Devices (RCD's): what's the deal?

Many people assume that only RCDs of no more than 30 mA may be used in the home. This is not entirely true: the 30 mA RCD serves as additional protection, and this additional protection ...
