Do photovoltaic panels work automatically

Overview

As long as the sun is shining, your home will automatically use the solar power first before drawing any from the utility company. At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. " Because most appliances don't use DC electricity, devices called inverters then convert it to. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. They absorb energy, convert it into usable power, and send any extra back to the grid, saving you money while cutting your carbon footprint. Find the best solar pros in your area.
