Double-glass solar modules have transparent lines

Overview

By contrast, double glass solar panels—also called bifacial solar panels—have a fresh design with transparent layers on both the front and back. Therefore, transparent backsheets are a solution for a lighter bifacial module. Due to their. Compared with dual glass, the transparent backsheet can successfully decrease module weight and the difference between the glass-transparent backsheet module and the dual glass alternative increases with the growing module size. For the 410Wp product, the weight difference is only 3.3kg, but for. ing option with the same 30-year warranty as GG. The outer layer of the TB uses DuPont™ Tedlar® film, which has significant anti-aging and anti-corrosion properties and is the only film. The Glass-Glass (G2G) Module: This design, often seen in bifacial and premium modules, encases the solar cells between two layers of glass.

Double-glass solar modules have transparent lines

Dual-glass vs glass-backsheet: The winning formula for bifacial modules

Our dual glass modules use the same internal circuit connection as a traditional glass-backsheet module but feature heat-strengthened glass on both sides. We produce the back glass with a unique drilling ...
