

**PIENAAR ENERGY (PTY) LTD**

# **Effect of household solar power generation**

## Overview

---

New research from the University of Bern in Switzerland has demonstrated that the installation of a residential rooftop PV system could increase a household's power consumption by up to 11%. This rise is linked to electric vehicle adoption or other high-usage appliances, which the study's author notes is not inherently negative or wasteful. Image: University of Bern. Solar energy is renewable and plentiful. Below are additional benefits of switching to solar electricity. From reducing. Therefore, this chapter presents a systematic literature review of studies on households' intention to install solar PV systems to identify the gaps in the field of study.

## Effect of household solar power generation
