

**PIENAAR ENERGY (PTY) LTD**

# Electric car charging station in garage

 **LFP 12V 100Ah**

## Overview

---

Yes, you can install an electric car charger in the garage. A dedicated 240-volt circuit is typically required. Charging indoors protects the unit from weather damage and ensures a safer charging. The best place for an EV Charger in the garage is where it has clear and unobstructed access to the electric vehicle or vehicles, proximity to the EV's charging port, and away from potential cable hazards. There are a few things to consider, from the type of charger to the state of your home's electrical system. Unlike traditional vehicles that you fuel elsewhere, your EV will spend hours plugged in at home, making your garage infrastructure a critical component of your daily routine. **SHOP EV CHARGERS NOW** Choose and prepare the location before installing the EV charger.
