# Energy Storage Motor Project

## Overview

---

The initiative, valued at RMB 4 billion (approximately \$550 million USD), will utilize Tesla's Megapack energy storage products to establish a grid-connected independent energy storage power station demonstration project. An artistic rendering of the planned Goldendale Energy Storage Project. Located on privately owned land zoned for energy, the project can store electricity for 12 hours and generate 1,200 megawatts of carbon-free electricity, enough to power about 500,000 homes in the Pacific Northwest. The Tesla's energy storage plant in Shanghai's Lin-gang Special Area commenced operation on Feb 11, as the assembly line started the production of the first Megapack unit. The Megapack, which is an advanced battery system designed for large-scale energy projects, can store more than 3,900. Advance Vehicle Technology Competitions (AVTCs) have been around for 30 years. Since 1994, the Hybrid Electric Vehicle Team (HEVT) at Virginia Tech has participated in AVTCs to pursue hybrid technologies. The rapid evolution of electric vehicles (EVs) needs advanced powertrain and charging technologies that emphasize efficiency, sustainability, and smart grid connectivity.
