## Overview

---

Slovenia has implemented a wide variety of energy efficiency measures, which have been very successful in the household sector but least successful in the transport sector, where car-centric behaviour is still considered the norm. However, change is slowly occurring there as well. Get a set of graphs commented by energy efficiency specialists. The final energy consumption (climate corrected) of Slovenia increased by 4% (+0. Industry accounts for 24%, households 23% and other consumption 13%. [1] Consumption in the. The Recovery and Resilience Plan addresses a number of challenges facing renewable energy producers and consumers in Slovenia. Slovenia maintains a strong energy policy framework, effectively balancing three Trilemma dimensions. Suppliers achieved 312 GWh of energy savings in 2022 with their contribution to the implementation of measures for efficient energy use. Installation of windows, doors.
