# **Energy storage ems system hardware and software**

## Overview

---

The Energy Management System (EMS) is the brain of the energy storage system. It integrates hardware and software to monitor, control, analyze, and optimize system operations. Emerson's Ovation™ Green renewable solutions combine field-proven power plant controllers and SCADA software into an integrated energy management system that dynamically monitors. Energy Management Systems (EMS) play an increasingly vital role in modern power systems, especially as energy storage solutions and distributed resources continue to expand. This enables real-time configuration, precise command execution, and data-driven optimization across individual sites and portfolios. However, the success of these projects relies heavily on selecting the right hardware and software.
