So, here's a look at five EV battery and lithium stocks that could charge ahead in the next decade:. Energy storage systems are increasingly in demand to increase the effectiveness of solar power arrays, with the Energy Information Administration estimating in February that new utility-scale electric-generating capacity on the U. power grid will hit a record in 2025 after a 30% increase over the. With numerous companies gearing up for production within the next few years, investor speculation surrounding solid-state battery stocks is reaching new heights. These innovative batteries offer a critical advantage, primarily via their vastly reduced charging times for EVs. As the clean energy transition accelerates, demand for lithium remains one of the biggest long-term investing stories. Tesla Tesla is the largest auto manufacturer by market cap, exclusively building electric vehicles. This growth isn't just about cars; it's powering everything. As we hurtle toward a grid dominated by solar, wind, and decentralized power, a new class of clean tech stocks is emerging to solve the greatest challenge of renewable energy: intermittency.
