

Fengping Wind Power Generation

Overview

The enormous S2000 Stratosphere Airborne Wind Energy System (SAWES) flew at an altitude of 2,000 metres in southwest China's Sichuan Province, generating electricity and successfully connecting to the power grid - a world first for a high-altitude wind power device. China is the world leader in wind power generation, with the largest installed capacity of any nation [1] and continued rapid growth in new wind facilities. [2] With its large land mass and long coastline, China has exceptional wind power resources: [3] Wind power remained China's third-largest. China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity Council on Sunday. Drax Group Plc, the operator of the U. As a result of new solar projects coming on line this year, we forecast that U. solar power generation will grow 75% from 163 billion kilowatthours. Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up. Modern wind turbines are.
