Founder of Photovoltaic Flexible Bracket

Overview

The flexible photovoltaic tracking bracket can prevent the photovoltaic modules from being twisted under the action of positive pressure, and overcome eccentric torque caused by deadweight eccentricity of the photovoltaic modules, thereby maintaining a row of. The flexible photovoltaic tracking bracket can prevent the photovoltaic modules from being twisted under the action of positive pressure, and overcome eccentric torque caused by deadweight eccentricity of the photovoltaic modules, thereby maintaining a row of. (PV) market was dominated by silicon-based solar cells. However, it will transition to PV technology based on flexible solar cells recently because of increasing demand for devices with high and customizable systems for these diverse applications. This listing includes patent applications that are pending as well as patents that have already been granted by the United States Patent and Trademark Office (USPTO). Flexible photovoltaic bracket refers to a bracket composed of flexible load-bearing cables, steel columns, steel inclined columns or cable-stayed cables, steel beams and foundations. It has. Disclosed in the present invention is a flexible photovoltaic tracking bracket, comprising: base structures fixed on the ground at intervals; beam structures mounted on the base structures; driving devices mounted on the beam structures and driving the beam structures to rotate about an axis; cable.

Founder of Photovoltaic Flexible Bracket

Introduction to the origin of photovoltaic flexible bracket

This chapter presents descriptions of flexible substrates and thin-film photovoltaic, deepening the two key choices for the flexible photovoltaic in buildings, the thin film, as well as the organic
