

PIENAAR ENERGY (PTY) LTD

Ganoderma lucidum under photovoltaic panels

Overview

In particular, we hypothesize that the combination of *G. japonica* fermented polysaccharides provides a novel and synergistic strategy to attenuate UVB-induced photoinflammation through modulation of TRPV4 and Nrf2 pathways, thereby distinguishing this study from prior. Epidermal photoinflammation has emerged as an atypical pathological response that poses a growing global threat to human health and well-being. In this study, a polysaccharide component (named LJGp) was isolated from *Laminaria japonica* and white *Ganoderma lucidum* fermentation broth, and its. *Ganoderma lucidum* were planted in an environmentally controllable mushroom room with different light supply modes that were, respectively, continuous white light (CK), red light (R), green light (G), blue light (B), and intermittent red light (R-), green light (G-), and blue light (B-), with a. Dear Editor: Ultraviolet (UV) radiation is a main cause of skin damage, including photoaging, generation of reactive oxygen species (ROS) and DNA damage. Photoaging in skin involves structural and functional modifications of the extracellular matrix (ECM) caused by the upregulation of the. *Ganoderma lucidum* is a mushroom which shows antitumor, anti-inflammatory and cy-toxic activity and grows prolifically in warm climates on decaying hardwood logs and Worldwide consumption of *G. lucidum* is several thousand tons, and the market is growing rapidly.

Ganoderma lucidum under photovoltaic panels

Ganoderma lucidum polysaccharides protect fibroblasts against UVB

Ganoderma lucidum has featured in traditional Chinese medicine for >1,000 years. Ganoderma polysaccharides (GL-PS), a major active ingredient in Ganoderma, confer immune regulation, ...
