

PIENAAR ENERGY (PTY) LTD

Georgia coal-to-electricity solar air conditioning

Overview

More renewables are on the way as summer drives up electricity use. It's that time of year when folks using air conditioning pay their highest power bills. But what are customers paying for?

Energy sources. Georgia is on the road to a cleaner electricity system, one that will create new economic opportunities, increase in-state generation, and lower power-related carbon dioxide emissions. Strong carbon pollution standards from the Environmental Protection Agency (EPA) are now needed to ensure that. Freight trains encircle, and earth moving equipment dots, the massive coal yard in front of Georgia Power's Plant Scherer in 2019. Georgia Power will expand its renewable energy generation and keep some of its coal plants open longer than previously planned under a compromise deal approved by state. Georgia is both a top five nuclear power producing state, and a top ten solar energy generating state.
