

PIENAAR ENERGY (PTY) LTD

Household uses solar energy to generate electricity and store electricity for heating

Overview

Solar photovoltaic (PV) systems convert sunlight into electricity. Solar energy can generate all or some of a home's electricity needs, depending on the number of solar panels used, and can heat water as well. With ample sunlight, PV systems can harness energy in hot and cold. Installing residential renewable energy systems, such as geothermal heat pumps and wind or solar energy systems, can save energy, lower utility bills, and earn homeowners money. From heating water to powering appliances, solar energy is proving its versatility. It's not just about saving money—it's about creating a sustainable future while enjoying the benefits of modern technology.
