How big a lithium battery should I use with a 10W solar panel

Overview

If you need 10 kWh daily, select a battery with a 12 kWh capacity, allowing for 80% depth of discharge. Grid-connected systems often need 1-3 lithium-ion batteries. Undersized and lights dip at dinner, pumps stumble on start, and winter days fail to recharge. This guide gives six inputs, one clear equation for. Are you struggling to pair your 10W solar panel with the perfect lithium battery?

This guide breaks down the calculations, real-world scenarios, and expert tips to help you make an informed decision. To account for this in the table, where the solar system size is large enough we've included two figures: The first being the maximum. A typical LED light might use 10 watts and run for 5 hours per day, totaling 50 watt-hours (Wh). Add up all these numbers to get your total daily energy consumption in watt-hours.
