# How big is China s power base station

## Overview

---

The Three Gorges dam in China is the largest power station in the world. The dam spans the Yangtze River in central China, just downstream from the Three Gorges. China possesses the world's largest installed electricity generation capacity, reaching 3,720 gigawatts (GW) as of September 2025, driven by rapid industrialization and a strategic shift toward renewables while maintaining a significant reliance on coal. As the world's largest energy consumer, understanding the intricacies of China's power generation landscape is crucial. This guide delves into the various types of power stations, their operational. Initially launched by the Center for Energy Studies as the Baker Institute China Oil Map in February 2019, the 2024 edition of the China Energy Map is an interactive, comprehensive and regularly updated resource provides critical data on China's energy infrastructure and is designed to support.
