

**PIENAAR ENERGY (PTY) LTD**

# **How high can a photovoltaic panel be built**

## Overview

---

Solar panels should be mounted at a height of 3.25" from the roof's surface to ensure optimal performance. This measurement takes into account the seam of the SSMR, typically 1.5" to 3" in height, the mounting hardware, adding approximately  $\frac{3}{4}$ " and the module frame. Ground-mounted solar panels are typically installed at a height that balances efficiency with practicality. The average height generally ranges from 3 to 5 feet above the ground. Recent data from the International Renewable Energy Agency shows properly elevated PV systems yield 18% better energy output than ground-hugging installation. Ever wonder why some solar farms look like. Solar, or photovoltaic (PV) panels as they're referred to in NFPA 1, Fire Code, are becoming more and more common on one- and two-family dwelling and townhouse roofs. 6 to 2 meters tall when installed on rooftops.

### How High Off The Roof Should Solar Panels Be Mounted?

Solar panels should be mounted at a height of 3.75' to 5.25' from the roof's surface to ensure optimal performance. This measurement takes into account the seam of the SSMR, typically 1.5' to 3' in ...
