How many containers does a solar power station EPC require

Overview

While multiple contracts could be signed to build a PV plant, the most common approach is a single EPC contract. 1 Under an EPC Contract, a Contractor is obliged to deliver a complete facility to the Project Company. The Project Company needs only to turn a key to start. The term Solar EPC represents a model where one company, known as the EPC contractor, is responsible for managing the entire process of a solar energy project. It encompasses the entire journey of a solar power project, from its conceptualization to its operational phase.
