

**PIENAAR ENERGY (PTY) LTD**

**How many lithium battery packs  
are needed for 60v**

## Overview

---

Let's consider a 60V Li-ion battery designed for an electric vehicle application. Assuming a moderate capacity requirement of 20 Ah and a cell voltage of 3.7V, we can estimate the number of cells as follows: . Here's a useful battery pack calculator for calculating the parameters of battery packs, including lithium-ion batteries. Use it to know the voltage, capacity, energy, and maximum discharge current of your battery packs, whether series- or parallel-connected. Electric mobility is no longer just about getting from point A to point B; it's about efficiency, reliability, and finding the perfect power source for your.

## How many lithium battery packs are needed for 60v

---

### Cells Per Battery Calculator

The Cells Per Battery Calculator is a tool used to calculate the number of cells needed to create a battery pack with a specific voltage and capacity. When designing a battery pack, cells can ...
