How many meters is the wind speed in a wind farm

Overview

A wind turbine requires a specific minimum wind speed, known as the “cut-in speed,” to begin rotating and generating electricity. This speed is between 3 and 4 meters per second (approximately 6 to 9 miles per hour) for most commercial turbines. 5 to 4 m/s) —needed to start generating power. The wind must blow at a minimum of 9 mph (4 m/s) for a small wind turbine to. Wind speed refers to the rate at which air moves horizontally past a specific point on the Earth's surface. Below this threshold, the wind lacks sufficient force.
