# **How many volts does a 480 watt photovoltaic panel have**

## Overview

---

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the wires). 2 kW system produces 1,200 watts. Let's go through an example so you can see how this formula works. A digital multimeter is used to directly measure the. The formula to calculate the voltage of a solar panel is:  $V = P / I$  where: The output voltage of a solar panel is determined by the ratio of its power to its current.
