

PIENAAR ENERGY (PTY) LTD

How much does a mobile factory energy storage battery BESS cost

Overview

All-in BESS projects now cost just \$125/kWh as of October 2025. Battery storage has moved past its infancy, driven by rapid factory scale-up, fierce competition and oversupply that has pushed costs sharply down. It represents lithium-ion batteries (LIBs)—primarily those with nickel manganese cobalt (NMC) and lithium iron phosphate (LFP) chemistries—only at this time, with LFP becoming the primary. Battery Energy Storage System (BESS) represents a power grid technology that stores electricity to enhance electric power grid reliability while increasing operational efficiency. Capex of \$125/kWh means a levelised cost of storage of \$65/MWh³. With a \$65/MWh LCOS, shifting half of daily solar generation overnight adds just \$33/MWh to the cost of solar. This report provides the latest, real-world evidence on. Battery energy storage costs have reached a historic turning point, with new research from clean energy think tank Ember revealing that storing electricity now costs just \$65 per megawatt-hour (MWh) in global markets outside China and the United States. This guide presents cost and price ranges in USD to help plan a budget and compare quotes. Operation and maintenance (O&M) costs. For the sake of simplification.

How much does a mobile factory energy storage battery BESS cost

The Cost of Battery Energy Storage Systems (BESS)

As of 2024, the average price for a utility-scale BESS is approximately \$148/kWh 1. For a 1 GWh system, this translates to \$148 million. It's important to note that this cost includes not just the ...
