How much does a photovoltaic panel cost 270

Overview

Let's cut through the solar jargon - when someone asks about a "270 photovoltaic panel," they're usually referring to a 270-watt solar module. In 2025, prices range from \$0.50 per watt for mid-range panels, putting a 270W unit between \$54 and \$135. Limited Market Availability: The 270W solar panel market has significantly contracted in 2025, with most major manufacturers discontinuing production in favor of higher-wattage panels. Only specialized manufacturers like Sungold and KF Solar continue producing new 270W models, creating supply. The price of a 270-watt solar panel can vary depending on several factors such as brand, quality, and supplier. On average, you can expect to pay anywhere from \$150 to \$300 per panel. But wait, that's like quoting the price. Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2026, with the national average at \$19,873 before incentives. Incentives also change from one state to another, shaping the final price dramatically. This 2026 guide breaks down the essentials so you can make a clear, confident decision.
